

Part One: During your next trip to the supermarket, record how many soaps and hand cleaners have antibacterial agents. Record the names of the product and the names of the antibacterial agent(s) in the hand cleaners and soaps.

Example: Purell; Antibacterial agent: 70% ethanol

Part Two: Use the internet to learn about the antibacterial agents contained in soaps and hand cleaners. Do you think the use of these antibacterial soaps and hand cleaners pose a risk to our ability to protect ourselves from disease? Explain your answer.

Your submission will be graded as follows:

- List of soaps and hand cleaners (15 points)
- Accurate listing of antibacterial agents in hand cleaners and soaps (35 points)
- Logical argument of the effects of using antibacterial soaps and hand cleaners (50 points)
