

Using [the Cancer.org site](https://www.cancer.org/cancer/cancer-causes.html), research the sources of pollution and how they can increase the risk of certain cancers.

In a 300-word analysis, answer the following questions:

- Which of these pollutants is the most difficult to avoid? Describe the type of cancer associated with that pollutant. Propose ways of reducing exposure to that pollutant.
- Which of these pollutants is easiest to avoid? Describe the type of cancer associated with that pollutant. Propose ways of reducing exposure to that pollutant.
- What type(s) of cancer is associated with all pollutants?

Submit your written analysis for grading. Your submission will be graded as follows:

- Accurate identification of the pollutant that is the most difficult to avoid and the type of cancer associated with it (30 points)
- Accurate identification of the pollutant that is most easily avoided and the type of cancer associated with it (30 points)
- Accurate description of the type(s) of cancer associated with all pollutants (40 points)
